

ABSTRACT: (CURRENTLY AMENDED) The present invention refers to an extra shade tent structure, to hand-held umbrella. The hand-held umbrella transforms into the free standing umbrella or tent. An umbrella handle lever made from two parts joined to one another. The top part always supports the umbrella skeleton in its unfolded position and a handle part turns from a fixed vertical to a fixed horizontal position, telescopically slides up through the upper part or completely detaches from the upper part of the handle lever. Three, four or more telescopic, folding, or other hard poles, joined to ends of umbrella-tent skeleton arms in a detachable or permanent manner. Triangular or other designed soft pulls, comprising of fabric or other material, form wall sides to support the umbrella-tent skeleton. The soft walls can include extra pockets, which can be filled up with solids or liquids to ensure further stability of the umbrella-tent structure.

Figs. 4A to 4G (**CANCELED**)

REMARKS:

By the above amendment, Applicants have amended the abstract to emphasize the novelty of the invention. They canceled the drawing group 4A to 4G and description of the drawings in specification as not relevant to the main novelty of the invention. Also applicants have rewritten all claims to define the invention more particularly and distinctly. Please disregard all previous amendments to the original application.
